

Arrakis Tweet

When you provide liquidity, guys, arbitrage traders can often eat into your gains.

They do this by trading with fresher pricing than what most DEXs can provide.

HOT DEX, tho, has a solver network that will create trades for you with more up-to-date pricing and fees.

This frustrates the arbitragers and protects your gains!

I don't rec a lot of DeFi products, but this is why I moved my LP over to HOT.

Give it a shot and let me know your experience.
